Figure 2 | Representation effects are not evidence of structural use

E1b qualitative synthesis (left); E2 measured contrasts, n=307 decisions / 49 videos (right).

A E1b: input-dependent relation bias

Video observations

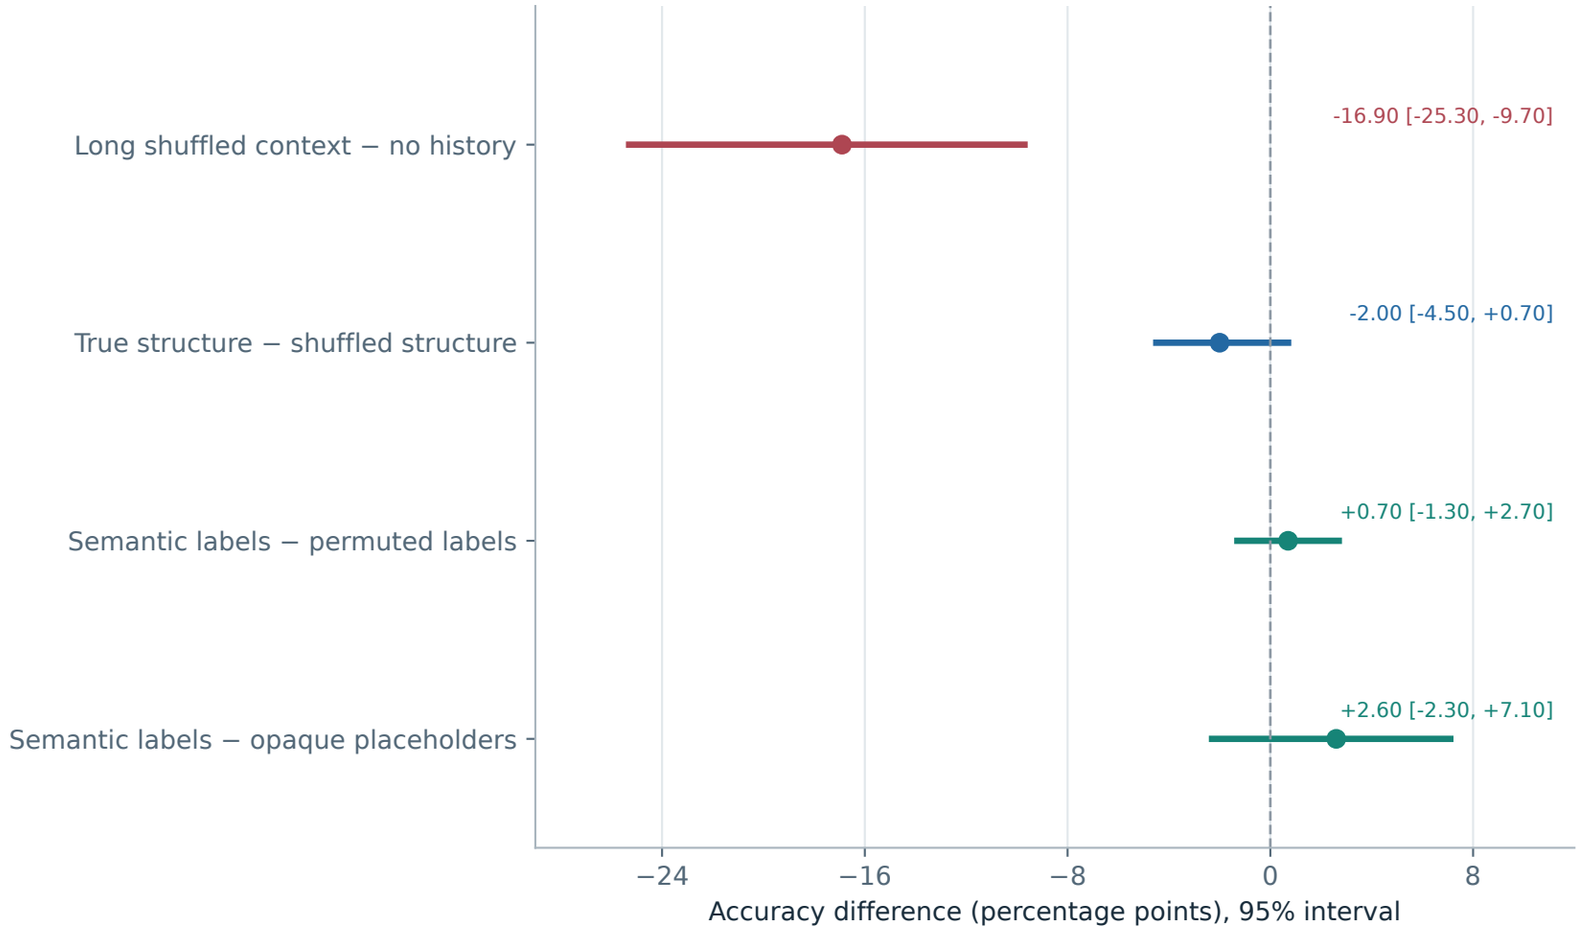
Visual continuity
Bias toward SAME

Text descriptions

Wording differences
Bias toward DIFFERENT

Qualitative only: no E1b recall values are inferred or fabricated here.

B E2: semantic content controls



Intervals are stored E2 contrasts. A non-significant semantic-label contrast is not a gain from random labels.
The long-context contrast changes more than token count; it is not a pure causal length estimate.
