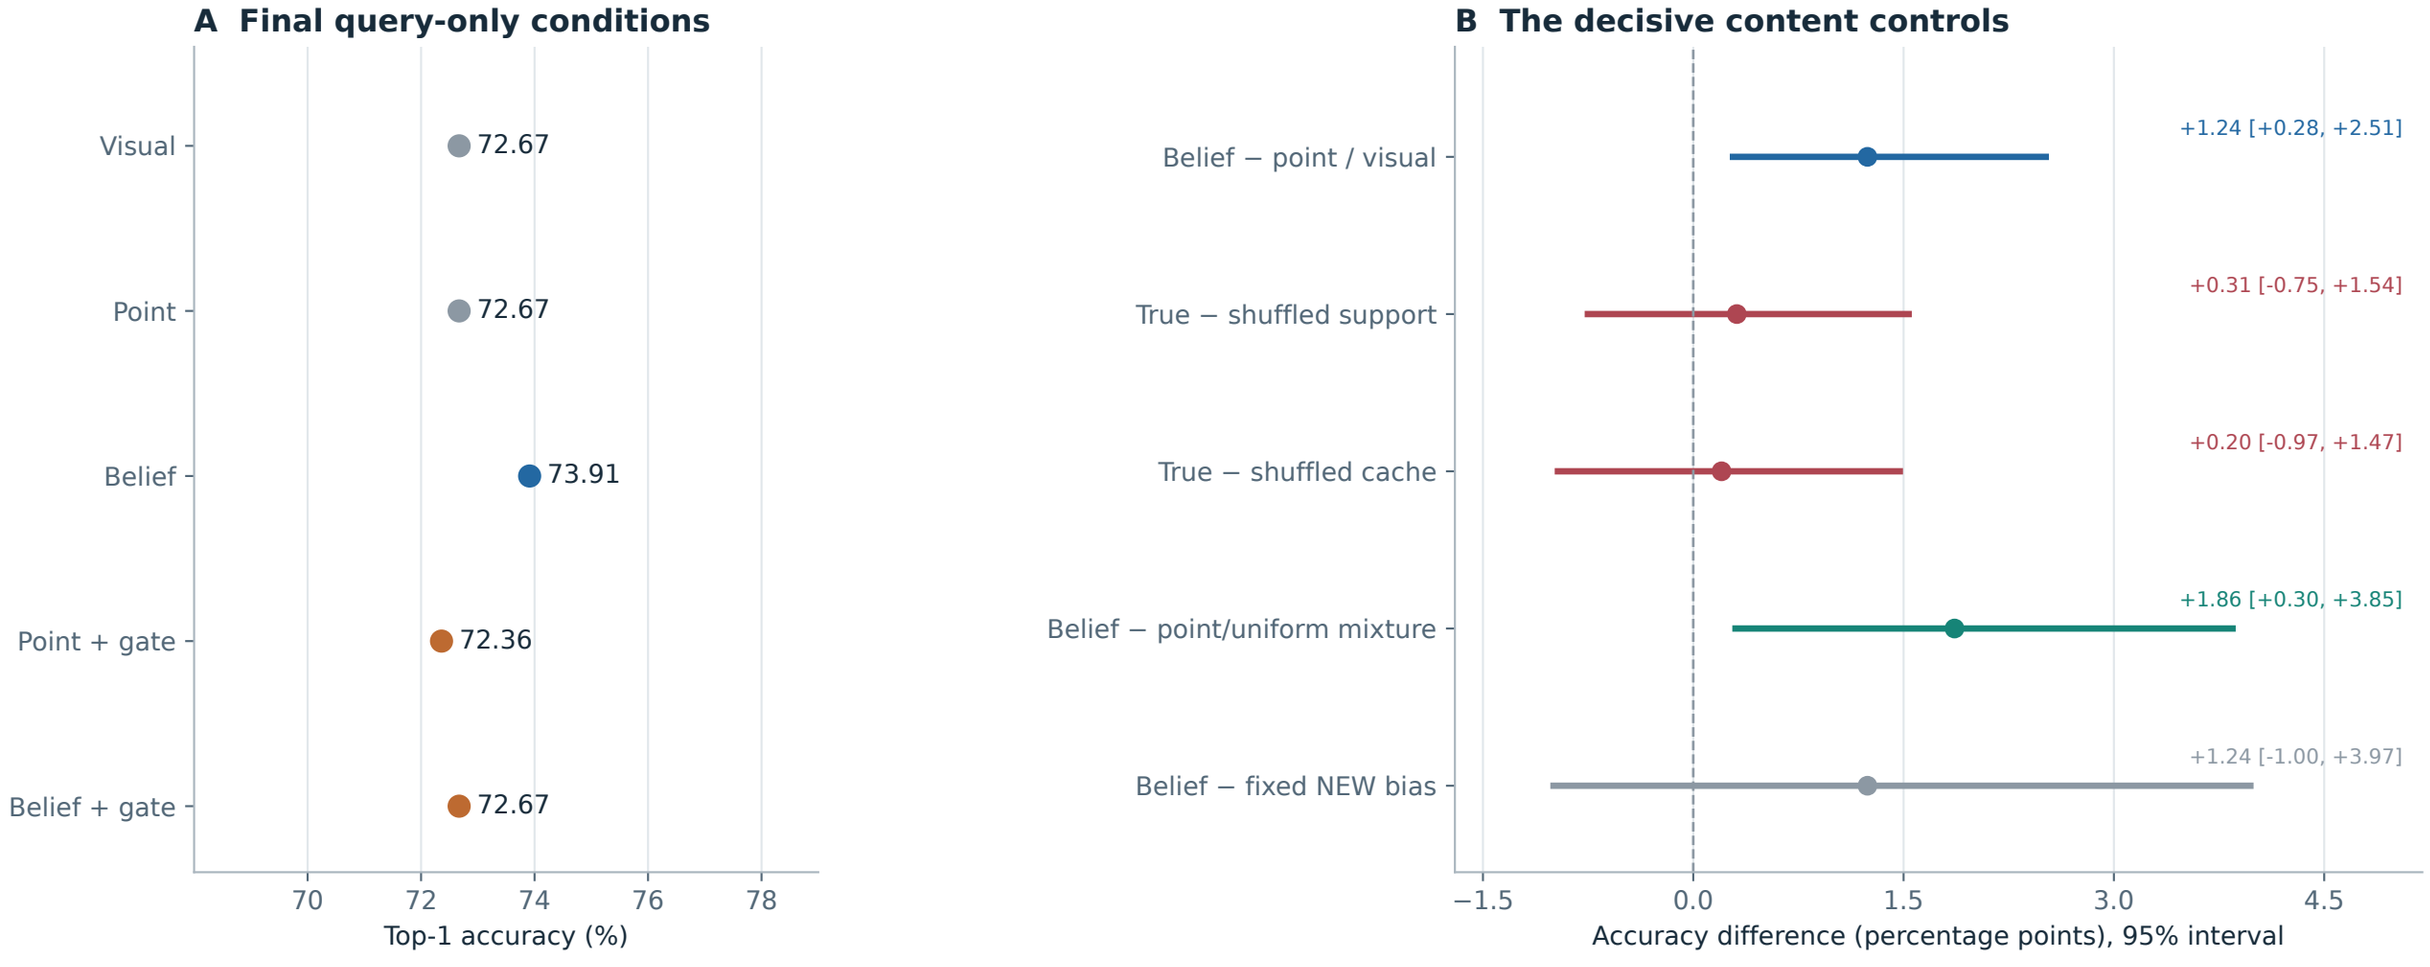
Figure 6 | U1: a small belief gain without established content specificity

Final causal snapshots + train-fold calibration | 5×4 video CV | 322 decisions / 49 videos.



Belief adds 4 correct decisions; oracle-prefix memory is still provided. True-vs-shuffled intervals cross zero.
20 permutation seeds; null intervals resample seeds × videos, others resample videos. No refit uncertainty. U1 CLOSED; FBG not run.
